

WELCOME TO CLAUDE TEAMS.

You've just been added to the Pappy & Co Claude Teams workspace. This is your *first stop* — a 10-minute read to get oriented before you start building, drafting, analyzing, or asking.

STEP 00

BEFORE ANYTHING ELSE · READ THIS FIRST

DOWNLOAD THE CLAUDE MAC APP. DON'T START IN CHROME.

The single most important thing you'll do this week. Go to claude.ai/download, install the macOS desktop app, and sign in with your Pappy & Co email. Use the desktop app as your daily driver — not the browser tab.

The web version at claude.ai works, and it's fine for quick chats from your phone or another device. But almost everything that makes Claude useful for our work — Cowork mode, file access, our connectors, the desktop tools — is only fully available in the Mac app.

WHY THIS MATTERS

The browser version is sandboxed. It can't read or write files on your Mac, can't open your selected folder, can't run scripts, and has limited connector behavior. If you start in Chrome, you'll think Claude is less capable than it actually is — and you'll waste a week wondering why everyone else's Claude can build XLSX files and yours can't. *Install the app first. Everything below assumes you have.*

WHY WE DID THIS

Claude is now a *teammate* — not a side tool.

We've wired Claude directly into the systems we run the business on: Shopify, Recharge, Cin7, Klaviyo, Attentive, Gorgias, GA4, our Google Workspace, Notion, Asana, and more. That means Claude can actually *do* work, not just talk about it — pull a report, draft a customer reply that goes into Gorgias, audit a Klaviyo flow, build a wholesale deck, or rewrite a product description in our voice.

To get value out of it, you need to understand three things: which **mode** of Claude to open, what **customizers** are wired up for us specifically, and how **privacy and sharing** work on the team plan. That's what this kit covers.

THE THREE DOORS

Cowork. Chat. Code. *Pick the right one.*

Same Claude underneath. Different surface. Each one is built for a different shape of work — and the wrong door makes the job slower, not faster.

01 · COWORK

DESKTOP APP · FILES & CONNECTORS

For getting actual work shipped.

Cowork is a desktop app that gives Claude a workspace folder on your Mac plus a sandboxed Linux shell. It can read your selected folder, write new files, run scripts, build spreadsheets and decks, and call our connected tools (Shopify, Cin7, Notion, etc.).

- Build a wholesale deck, save it to your Desktop.
 - Pull last month's Shopify orders into an XLSX.
 - Reorganize a folder of supplier PDFs.
 - Draft + send a Klaviyo campaign brief.
 - Run a multi-step task with the TodoList visible.
-

Best when the deliverable is a file, a folder change, or a multi-tool workflow.

02 · CHAT

WEB · MOBILE · QUICK THINKING

For thinking, drafting, and asking.

Chat is the classic Claude surface — claude.ai in your browser or the mobile app. No file system. Great for drafts, conversations, brainstorming, and asking questions that don't need to touch our systems. Our connectors still work in chat for read-only and lightweight tasks.

- Draft a Slack message to the team.

- Brainstorm Q3 cigar subscription messaging.
 - Summarize a vendor PDF you paste in.
 - Translate a wholesale email into French.
 - Quick GA4 question — "what was site CVR last week?"
-

Best when you want a fast answer or a draft you'll polish elsewhere.

03 · CODE

TERMINAL · REPOS · FOR DEVELOPERS

For when the work lives in a repo.

Claude Code is a CLI tool that runs in your terminal and operates inside a git repository. It edits code, runs tests, opens PRs, and respects your project's structure. If you don't write code day-to-day, you don't need this — Cowork covers nearly every operator workflow.

- Refactor Liquid templates in our Shopify theme repo.
 - Wire up a new Shopify Flow webhook.
 - Build a small internal MCP server.
 - Audit our server-side tagging configs.
 - Anything ending in "...and open a PR."
-

Best for engineers and the small group of us comfortable in a terminal.

RULE OF THUMB

If the answer should land as a *file* on your computer, open Cowork. If you want a *conversation*, stay in Chat. If you're touching a *repo*, you're in Code.

WHAT'S WIRED UP FOR US

Pappy & Co's *customizers*.

A "customizer" is a plugin or connector that gives Claude direct, authenticated access to one of our systems — or teaches it our way of doing something. These are the ones already set up in our workspace. You don't have to install them; they're available to you the moment your invite goes through.

OPERATIONS & COMMERCE CONNECTORS

■ SHOPIFY (RETAIL + WHOLESALE)

Two storefronts wired separately. Pull orders, customers, products, fulfillments, and inventory levels. Create draft orders, refunds, and update product data.

READ

WRITE

■ CIN7 CORE

Inventory, suppliers, purchase orders, stock transfers, and adjustments. The system of record for what's actually in the warehouse.

READ

WRITE

■ INVENTORY PLANNER

Forecasts, replenishment plans, vendor data, sales reports. Use this for demand planning and PO drafting.

READ

WRITE

■ KLAVIYO

Marketing automation — campaigns, flows, segments, profiles. Audit a flow, draft a campaign, pull engagement data.

READ

WRITE

■ ATTENTIVE

SMS marketing — subscribers, custom attributes, events, product catalog uploads. Build segments and trigger custom events.

READ

WRITE

■ GORGIAS

Customer support — tickets, macros, customers, tags, rules. Triage, draft replies, build views and macros.

READ

WRITE

■ GA4 (GOOGLE ANALYTICS)

Run reports — sessions, conversions, audiences, real-time, pivot reports. Pull aggregated metrics, not user-level PII.

READ

■ GOOGLE WORKSPACE

Gmail (read, drafts, threads, labels), Calendar (read, create, update events), Box for files, plus Word/PowerPoint/PDF tooling.

READ

DRAFT

■ NOTION + ASANA

Notion for docs, databases, knowledge. Asana for project tracking, tasks, portfolios. Both wired for read and write.

READ

WRITE

WORKING & COMMUNICATION CONNECTORS

■ SLACK

Search messages, summarize channels, draft announcements, generate digests, run a daily standup. Your Slack identity, scoped to channels you can see.

READ

DRAFT

■ ZOOM

Recordings, transcripts, meetings, Zoom Phone, Zoom Docs. Pull a transcript, summarize a sales call, find a clip.

READ

■ DOCUSIGN

Envelopes, agreements, templates, workflows. Useful for vendor contracts and wholesale paperwork.

READ

SEND

■ LINKEDIN

People search, company profiles, conversations, jobs. Use it for wholesale prospecting and competitive intel.

READ

■ CANVA

Design generation, brand kits, exports. Useful for quick social, internal slides, or wholesale one-pagers.

READ

CREATE

■ APOLLO + COMMON ROOM

Lead enrichment, prospect lists, outreach sequences. Wholesale-relevant — let me know before using these for retail.

READ

WRITE

PAPPY-SPECIFIC SKILLS

■ PAPPY & CO BRAND KIT

Our official brand identity — colors (Mustard Gold, Dark Charcoal, Cream, Terracotta, Peach, Sage, Olive), the three approved typefaces, logo rules, voice, patterns. Triggers automatically when you ask for branded output.

ALWAYS ON

■ BRAND VOICE ENFORCEMENT

Reviews and rewrites copy against the Pappy & Co voice — confident, heritage-rooted, never cliché. Catches "y'all," forced bourbon tropes, and tone drift.

ON DEMAND

■ PRODUCTIVITY (MEMORY + TASKS)

Maintains a working memory of our team, projects, shorthand, and tasks. Why "Christy handles ops" doesn't need to be explained every time.

PERSISTENT

SKILL PACKS WE LEAN ON

Beyond the connectors, we've installed packs for *marketing, sales, customer support, finance, HR, ops, legal, data, design, engineering, and PM*. They're all available — invoke one with a slash command (e.g. `/marketing:campaign-plan`) or just describe what you need and Claude will pick the right one.

WHAT THIS LOOKS LIKE IN PRACTICE

A few *actual* Pappy asks.

The fastest way to figure out where Claude fits is to imagine asking it the kind of thing you'd otherwise pull together yourself.

OPERATIONS

"Build me a wholesale order recap for Q1 by account, with reorder rate and AOV — exported to a clean XLSX."

→ COWORK · SHOPIFY WHOLESALE + XLSX SKILL

MARKETING

"Draft three subject lines for the Father's Day Pappy Cigar Subscription teaser, in our voice."

→ CHAT · BRAND KIT + VOICE ENFORCEMENT

CUSTOMER SUPPORT

"Show me Gorgias tickets from the last 7 days tagged 'damaged' — what's the pattern?"

→ COWORK · GORGAS + DATA ANALYSIS

INVENTORY

"Which SKUs have under 30 days of cover heading into Derby Week?"

→ COWORK · CIN7 + INVENTORY PLANNER

WHOLESALE

"Build a one-page Pappy & Co line sheet for The Cigar Store of America — pulling current product data."

→ COWORK · SHOPIFY + BRAND KIT + PPTX

ANALYTICS

"Compare landing page CVR on the bourbon balls collection week-over-week. What changed?"

→ CHAT · GA4

PRIVACY ON CLAUDE TEAMS

Private chats vs. *shared projects*.

*The most-asked question on day one: "Can the team see what I just typed?"
Short answer — only if you put it in a Project that's set to share with the workspace. Here's the long answer.*

Private (default)

Your personal chats are yours. When you open a new chat from the Claude home screen, it lives in your account only. No one in the Pappy & Co workspace can read it — not me, not the owner, not admins.

- One-off questions, brainstorm, drafts → keep them private.
- Anything personal you want Claude's help with → private.
- Sensitive HR, comp, or 1:1 conversations → private (and follow our data handling policy below).

Anthropic doesn't train on your team's data. Default-deny is enforced at the workspace level.

Shared via Projects

Projects are the shared layer. When you create a Project and set it to "Share with workspace," every chat inside that project is visible to other Pappy & Co teammates with access. Files you upload, custom instructions you set, and chats you start all become team-readable.

- Cross-functional work — Q3 launch, wholesale push, Derby campaign.
- Shared SOPs, reusable prompts, ongoing initiatives.
- Anywhere you'd otherwise duplicate context across teammates.

You can also keep Projects private. The default is your choice when you create it.

Practical rule for our team: If two or more people will benefit from continuity on a topic, make it a shared Project. If it's "just me thinking out loud," keep it in a private chat. When in doubt — start private. You can always move work into a shared Project later.

NON-NEGOTIABLE

Our *data handling* tiers.

You will run into sensitive data. Our policy classifies it into four tiers — treat the tier as the ceiling. Don't move data to a less-restricted tier without checking with me first.

TIER 1 · NEVER

SECRETS

API keys, passwords, OAuth tokens, signing secrets, payment processor credentials, 2FA recovery codes. **Never paste these into any AI tool, ever.** Use the official MCP/connector flow.

TIER 2 · DON'T

REGULATED PII

Customer credit card numbers, CVVs, bank info, SSNs, government IDs, login credentials, age-verification documents. Stays in the system that needs it — never in chat, Slack, or notes.

TIER 3 · APPROVED TOOLS ONLY

CONFIDENTIAL BUSINESS DATA

Wholesale pricing, supplier costs (Cin7), contracts, P&L, payroll, headcount, unreleased product info, customer lists. Use Claude Teams, not personal accounts.

TIER 4 · GENERALLY FINE

INTERNAL BUT LOW-RISK

Aggregated analytics, public marketing copy, published product info, GA4 reports without PII, draft creative, general SOPs.

HARD RULES

Never connect a personal Claude account to company data. Never share logins. Never use customer data for AI training. Never paste a Tier 1 secret anywhere — if you need an agent to access a system, it goes through the official MCP connector flow. **If in doubt, ask Jonathan before pasting, uploading, or connecting.**

FIRST 30 MINUTES

Your *quick start*.

Run through this once and you're operational. Most of it is pre-wired — you're really just signing in and trying things.

1

STEP ONE · MOST IMPORTANT

Download the Mac app from claude.ai/download. Don't use Chrome as your daily driver — the browser version can't access files or run our connectors fully.

2

STEP TWO

Accept your Claude Teams invite and sign into the Mac app. You'll land in the Pappy & Co workspace automatically.

3

STEP THREE

Open Cowork mode in the Mac app, select a working folder (Desktop or a project folder is fine), and try a small ask.

4

STEP FOUR

In your first chat, ask: *"What customizers and connectors do I have access to?"* — Claude will list them.

5

STEP FIVE

Try a real task from the examples above. The brand kit will trigger automatically when relevant.

6

STEP SIX

Decide: is this work better as a private chat or a shared Project? Make a Project for anything ongoing.

7

STEP SEVEN

Re-read the data tiers above. Bookmark them. Send Jonathan questions, not pastes.

8

STEP EIGHT

Send Jonathan one workflow you'd love to automate this quarter. We'll wire it up.

PAPPY & COMPANY
LOUISVILLE, KENTUCKY

"We make fine bourbon, at a profit if we can, at a loss if we must, but always fine bourbon."

— JULIAN P. "PAPPY" VAN WINKLE, SR.
